CURRENT CONCEPTS IN JOINT REPLACEMENT®

Winter 2014

Hyatt Regency Grand Cypress
Orlando, Florida

December 10 - 13, 2014

A Continuing Medical Education Program

Course Director:
A. SETH GREENWALD, D.PHI.(OXON)
COURSE DESCRIPTION
This CME program is open to orthopaedic surgeons, residents, nurses, and members of the orthopaedic and allied health industries.

• This meeting will focus on both primary and revision outcomes, surgical approaches, new materials and design as well as address problems of articulation choice, fixation, bone deficiency, instability, trauma, and infection for hip and knee replacement.

• Topics delve into a triad of design, patient factors, and technical proficiency responsible for achieving clinical longevity in hip and knee reconstruction.

• An assemblage of contemporary thought leaders will probe the boundaries of these problems and offer solutions for joint pathologies where arthroplasty is indicated.

• Plenary commentary, didactic clinical reports, technique videos, debate, and case challenges define the formats of presentation, which provide an optimal learning opportunity for orthopaedic surgeons and other allied professionals involved in joint reconstruction.

LEARNING OBJECTIVES
As a result of attending this symposium, the participant will be able to:

• Identify problems, concerns and solutions relevant to primary and revision hip and knee arthroplasty including articulating surface wear, inter-component failure, fractures, infection and bone loss as well as short- and long-term tissue response.

• Discuss optimal technical application of current and evolving fixation techniques in primary and revision procedures including cement, hydroxyapatite, porous coating, press fit, impaction grafting and evolving porous metal technologies.

• Appraise evolving surgical techniques and implant technologies through didactic presentation as well as evaluate early and long-term clinical outcomes.

WALKING WITH GIANTS® ASK THE EXPERTS
